The Problem

Why Execution Often Fails
Before It Begins

Structural Bottlenecks

Projects run over budget
and behind schedule.

Technology decisions are
made without architectural
validation.

Systems evolve into a
complex "Franken-stack".

Technical debt slows
delivery and increases
costs.

Product and engineering
teams lose strategic
alignment.

The Impact

Without a validated blueprint, engineering efforts are frequently misaligned with strategic goals

Business Impact

Roadmaps delayed by months.

Credibility gaps with VCs and boards.

Operational bottlenecks caused by manual processes.

Slower product delivery and growth.

Typical Cost

\$30k+

monthly "Franken-stack" burn

4x

output velocity gap

THE SOLUTION

Roadmap Workshop

**Great products fail
when execution
begins before
alignment.**

Before investing months into development,

Establish the architecture, priorities,

and execution plan required to scale.

Build the engine, not the band-aid.

1zero

Signature Approach

We apply a strict, algorithmic methodology to eliminate bias from product development

1

Get Current State

Assess the existing product, team, and business landscape.

2

Understand Challenge

Identify key obstacles, opportunities, and desired outcomes.

3

Weight Priorities (1-5)

Score initiatives based on business impact and urgency.

4

Estimate Effort

Evaluate implementation complexity, resources, and timeline.

5

Calculate SCORE

Generate a weighted recommendation for decision-making.

The Prioritization Algorithm

Every feature is evaluated through a structured impact-versus-effort framework to remove bias and maximize return on investment.

ANALYZE

Understand the challenge, define desired functionality, and assign a strategic impact score.

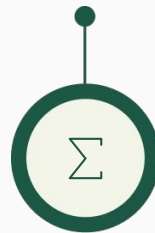

ESTIMATE

Evaluate the technical complexity, dependencies, and implementation effort required.

SCORE

Generate a priority matrix that identifies what to build now, later, or not at all.

Score = Impact / Effort

A Two-Day Strategic Sprint

Day 1 — Discovery & Logic

-  Understand the current state
-  Map core user roles
-  Identify bottlenecks and risks
-  Define business objectives

Day 2 — Roadmap Framework

-  Understand the current state
-  Map core user roles
-  Identify bottlenecks and risks
-  Define business objectives

Blueprint Deliverables

✓ Signature Features File

A complete, scannable priority matrix that ranks must-have infrastructure vs. nice-to-have future features.

✓ MVP Core User Flows

Visual maps of critical user journeys and operational workflows.

✓ Investor Pitch Architecture

A structured framework covering problem, solution, USP, market opportunity, and growth narrative.

✓ Risk Matrix & Scalability Blueprint

Identification of technical, operational, and regulatory risks before development begins.

CASE STUDY: FREEFLOW

DIGITAL PROPERTY REVOLUTION

A real estate transaction platform designed to streamline Bali property markets through trust and transparency.

- Blockchain-backed ownership verification
- Complex commission splitting logic
- Direct transactions with digital signatures

Outcome: Cohesive roadmap ready for investor funding within 48 hours of completion.

THE MASTER FEATURES FILE

ELIMINATING BIAS

We provide a scannable priority matrix that ranks must-have infrastructure versus "nice-to-have" bloat.

Every feature is defended by data, ensuring your developer capital is spent on high-impact capability, not vanity metrics.

Security First

User Flow Logic

Data Structure

INVESTOR-READY BLUEPRINT

Problem Statement

Articulating market gaps and user pain points with precision.

Financial Model

3-5 year growth models
(TAM/SAM/SOM)
based on validated logic.

Go-To-Market

Tactical plan for soft launches and market penetration strategies.

Scalability

Identification of structural bottlenecks before commitment.

BEYOND THE BLUEPRINT:

THE DEVPOD™

HIGH VELOCITY

4.0x Equivalent Output of
standard full-time
developers via
pre-integrated pods.

CTO OVERSIGHT

Includes Technical
Architect, UI/UX
Specialists, and 5%
fractional CTO oversight.

IP OWNERSHIP

100% Asset Autonomy
& IP Ownership from
Day 1. Documented
handover ensured.

THE MVP BLUEPRINT MENU

Discovery Audit

Duration :
90 Minutes

Key Deliverables :
**Operational
Architecture Review**

Fixed Price:
\$500

Blueprint Workshop

Duration :
2-3 Days

Key Deliverables :
**Master Roadmap, Pitch
Deck, SCORE Matrix**

Fixed Price:
\$5,000

The Enterprise Pod

Duration :
Monthly

Key Deliverables :
**Full Scale Engineering
Capability - BUILD OUT**

Fixed Price:
\$10k/mo

Stop Guessing Start Building

Let's kick off with a 30-Min Operational Architecture Review today.
