

Black Stump - Website Platform Migration

- ⚡ Increased campaign launch speed
- 🔧 Built a scalable foundation for future growth
- ⚙️ Lowered long-term maintenance overhead

Project Scope

The business was evolving, but the website was still running on an architecture designed years ago. Adding new pages felt slow. Making changes required technical overhead. Scaling felt constrained.

Rather than continue patching an aging system, we rebuilt the foundation through a strategic platform migration.

Now the website is not just operational—it's adaptable, flexible, and ready for what's next.

Service :	Timeline :
Legacy Migration	Phase 1 : System Audit & Mapping
	Phase 2 : Platform Setup
Duration :	Phase 3 : Content Transfer
2 Months	Phase 4 : QA & Go Live
Products used :	
Duda CMS	

Context & Background

BLACK STUMP Black Stump Technologies is an Australian-based sustainability technology company operating globally, specializing in mobile renewable energy and refrigeration systems deployed in remote and urban environments.

As the company expanded internationally, their legacy Drupal website no longer supported their operational and marketing needs.

How can the system be modernized without disrupting users' ability to perform critical tasks?

Problem

Why migration was needed?

- The Drupal system required ongoing technical maintenance.
- The internal team needed a CMS that non-technical staff could manage independently.
- A modern system was needed to support future growth while ensuring users could transition without disruption.

Goals & Success Criteria

- Lower technical overhead and simplify system maintenance without impacting operations.
- Increase adoption of the new system
- Complete tasks without relearning everything

New Platform Selection

To meet the defined success criteria, we selected a platform that reduces technical dependency while remaining intuitive for internal teams.

Duda was chosen because it directly aligned with the project goals:

- ✓ Lower technical overhead through managed infrastructure
- ✓ Increase adoption with an intuitive editing interface. Ease of use for non-technical teams
- ✓ Enable teams to complete tasks without extensive retraining

Rather than choosing the most flexible developer-heavy CMS, the priority was operational simplicity and long-term sustainability.

Migration Strategy

- Content & Structure Audit
- Page hierarchy and URL structure
- Blog archives and dynamic content
- Broken link verification
- Media assets and downloadable files
- Performance checks

Impact / Results

We give report monthly and this is the one of that:
Website perform report Feb 2026

Market Growth

26.1% (353 users) Total active users increased by	+90.7% Strong growth in the United States
New visitors from India, Germany, and Israel	+385.7% Strong growth in Singapore

Technical Stability

0.04 seconds Server response time	83/100 SEO score stable
SSL secure and properly configured	Fully mobile-optimized

The platform was successfully modernized without compromising speed, security, or international growth momentum.
